1. General

1.1. Introduction

This guide serves as a framework for handling rule violations in *Wonders of The First* during in-person play. Infractions—errors that break game or tournament rules—are categorized into three types: **Conduct** (player behavior), **Gameplay** (violations of the Comprehensive Rules), and **Tournament** (violation of the Tournament Rules and Policy). This document outlines the most common infractions, provides procedures for addressing them, and defines appropriate penalties to maintain fair and consistent rulings.

The procedures and penalties in this guide serve two key purposes: educating judges on the recommended rulings for common infractions and protecting them from personal liability when enforcing these rulings. If a judge follows the guidelines outlined in this document, any disputes or complaints are directed at the policy itself, rather than the individual judge.

Additionally, this guide establishes clear expectations for players, promoting better gameplay by ensuring consistent enforcement of procedures and penalties. However, deviations from this guide do not offer the same level of protection or consistency, and judges should carefully consider this before applying a modified ruling.

There are three distinct Rules Enforcement Levels (RELs): Casual, Competitive, and Professional. Each REL has unique expectations, and player infractions are addressed differently depending on the level.

- **Casual REL:** Tailored for local in-store play, this level focuses on fostering a welcoming environment for player education and enjoyment.
- **Competitive REL:** Designed for structured competition, this level aims to balance player education, enjoyment, and maintaining tournament integrity.
- **Professional REL:** Reserved for the most elite levels of competitive play, this level prioritizes tournament integrity above all else.

The *Wonders of The First - Penalty Guide* establishes the procedures and penalties for judges to enforce at official tournaments with **competitive** or **professional** rules enforcement. This document ensures consistency in handling infractions, maintaining fairness, and preserving the integrity of the tournament.

This document will be updated as necessary, with any changes announced through communication channels operated by *Wonders of The First*

1.2. Addressing Infractions

Infractions are handled by first identifying the issue and then applying the appropriate procedures and or penalties.

- Judges should only intervene in a game if an infraction occurs or an investigation is required.
- Judges should not intervene for Missed Trigger infractions that warrant only a **Caution**, or for minor infractions resolved promptly by both players.
- When issuing a penalty, the judge must explain the infraction, resolution procedure, and penalty to all involved players.
- Any **AP1 or higher** penalty must be confirmed with the **Head Judge**, except for **Tardiness** and **Decklist** infractions.
- If multiple related infractions occur, each is addressed separately, but only the highest penalty is issued.
- If a ruling takes longer than one minute, a time extension (rounded up to the nearest minute) should be given.

Judges can make mistakes. If a mistake happens, the judge should acknowledge it, apologize, and correct it if possible. If a judge's error causes a player to commit an infraction, the **Head Judge** may consider it as grounds for deviation from standard penalties.

Deviations

In rare cases, an infraction may not fit neatly into the categories outlined in this document, or the standard procedure and penalty may not fairly address the situation while maintaining tournament integrity.

In such cases, the Head Judge has the authority to deviate from the recommended guidelines by applying a modified procedure or penalty. When a deviation occurs, the Head Judge must explain the standard policy and the reason for the deviation to all involved players.

Judges may consult the Head Judge and suggest a deviation when necessary, but the final decision rests with the Head Judge to ensure consistent application throughout the tournament.

Common Reasons for Deviation:

- A Warning is issued for a gameplay infraction, but adjusting the procedure results in a more equitable game state.
- The standard procedure or penalty does not fairly address the unique circumstances of an infraction.
- A player commits multiple related infractions at once, requiring an increased penalty to equalize the advantage gained.

Infractions in this guide are outlined in their most common forms. When an infraction occurs that does not fit neatly into these categories, judges must determine the appropriate fix and/or penalty, with final approval from the Head Judge.

When adjusting a ruling, judges should begin with the most relevant infraction and consider these three key questions:

- Will this help players learn?
- Will this ensure fairness?
- Will the integrity of the tournament be maintained?

Repeated Infractions

If a player repeatedly commits the same infraction or fails to correct their behavior after receiving a penalty, the judge or Tournament Organizer should escalate the penalty level for each recurrence to reinforce the importance of following the rules. This results in a progressively harsher penalty for repeated offenses.

Generally, increasing the penalty by one step per repeated infraction is sufficient. For example, a fourth instance of an infraction that initially warranted a Caution may result in a Game Loss. In some cases, a larger escalation may be necessary.

Judges and Tournament Organizers should also consider a player's history beyond the current event. If a player has a pattern of repeated infractions at previous tournaments, it may be appropriate to start with a higher penalty than what is outlined in this guide. For instance, a player with a history of Unsporting Conduct: Minor may receive a Warning or Action Penalty instead of a Caution for their first offense at a new event.

Multiple Infractions

Players who commit multiple different infractions during an event are often simply uninformed or inexperienced. However, it is also important to recognize that some players may deliberately commit various errors under the guise of mistakes to gain an unfair advantage. These players should be firmly discouraged from continuing such behavior.

The decision to escalate a penalty for a player who has committed different infractions throughout the event is left to the discretion of the judge or Tournament Organizer. While repeated infractions of the same type typically warrant escalating penalties, multiple different infractions may not always require increased penalties unless there is reason to believe the player is acting in bad faith.

1.3. Types of Penalties

Penalties serve as a tool for judges to track infractions, educate players to prevent future violations, and balance any advantages gained from infractions.

All penalties, except "Caution," should be recorded during the tournament to track player errors. When a penalty is upgraded or downgraded, the judge issues a more or less severe penalty, respectively. The penalties are listed below in ascending order of severity.

Caution

A Caution is a verbal warning for a minor infraction. It is used when the infraction does not provide the player with an advantage or when the issue can be resolved through the procedure and education without needing to be recorded for the tournament.

Warning

A Warning is a formal notice for a minor infraction. Repeated Warnings for the same or similar infractions may result in a more severe penalty.

Action Penalty (AP)

An Action Penalty (AP) reduces the number of actions a player starts with for a set number of rounds. It is more severe than a Warning but less severe than a Game Loss, making it especially relevant in best-of-one formats.

An AP functions as a game macro with the following effect:

"Reduce the penalized player's current actions by 1. If that player has no actions, reduce their actions gained at the beginning of the next round by 1."

Game Loss

A Game Loss immediately ends the current game, and the player is considered to have lost. It is issued when the integrity of the game is significantly compromised or as a severe penalty to emphasize the seriousness of the player's actions.

If a Game Loss is issued between games, it applies to the player's next game. In a best-of-1 format, a Game Loss results in the player losing the match. If Game Losses are issued to all players simultaneously, the infractions are recorded, but the game proceeds as if no player lost.

Match Loss

A Match Loss results in the player losing the match, regardless of the game score. It is used when the integrity of the match is irreversibly compromised or as a more severe penalty than a Game Loss. If the player is between matches or the round time has ended, the Match Loss applies to their next match in the event. If all players are simultaneously issued a Match Loss, the match is recorded as a double match loss.

Disqualification

Disqualification results in a player being removed from the tournament. It is the most severe penalty and is applied for actions that compromise the integrity of the tournament or for serious conduct violations. A disqualified player loses their current match (if in progress) and is dropped from the tournament. They forfeit any prizes they were due, but may keep any prizes received up until that point.

Once disqualified, the player is no longer part of the standings, and all players below them move up by one position. However, if the disqualification occurs after a cut, no additional players will advance into the cut.

1.4. Types of Procedures

Procedures allow judges to adjust the game state to maintain its integrity. They should only be applied when relevant to the specific infraction. Judges should not use an unrelated procedure as a substitute for a penalty (e.g., destroying a Wonder to correct drawing an extra card).

Cards to the Top or Bottom of the Deck

This procedure moves specific cards to either the top or bottom of the deck, as chosen by one player. If multiple cards are moved, the opponent decides the order and placement of each card. When applied correctly alongside other procedures, this helps

balance information and strategic advantages gained through game or tournament errors.

Due to effects like *seek*, shuffling cards into the randomized portion of the deck is often impractical for many infractions. This procedure offers an alternative approach to restore game balance more effectively

Partial Fix

A partial fix artificially adjusts the game state to correct an infraction while minimizing disruption. When applied correctly, it helps balance an unfair advantage without requiring a full rewind or a harsher penalty like an AP1.

Partial fixes should not be used if a player likely made a strategic decision based on the infraction or if the illegal action and its consequences are too complex to address in isolation.

Examples of partial fixes include:

- Correcting an incorrect action or energy total.
- Moving a card to the correct zone if it was placed incorrectly, remains known to all players, and does not majorly disrupt the game.
- Revealing a card that should have been previously shown to a player.
- Adjusting counters if the affected cards are known to all players and the change does not significantly impact the game.

Rewind the Game State

Rewinding the game state restores the game to a previous legal state, removing any potential advantage gained from an infraction. However, it does not erase information a player has learned and, in some cases, may introduce unintended strategic advantages.

- **Simple Rewind:** Reverses the last action(s) and is used when an infraction is caught immediately.
- **Full Rewind:** Reverses multiple actions when the game has progressed beyond the infraction. A full rewind should only be performed if the judge can accurately reconstruct the previous legal game state without revealing additional information to either player.

Shuffle into a Random Portion of the Deck

Shuffling into a random portion of the deck involves taking the contiguous randomized portion of the deck, adding or removing cards, shuffling it, and then returning it to its

proper place while keeping the non-randomized portions intact. When done correctly, this procedure eliminates any state or information advantage gained through an infraction. However, due to the presence of seek effects, the deck's position may not be fully randomized, making this procedure difficult to apply. Therefore, it should only be used as part of a deviation when appropriate for the specific game state and infraction.

2. Conduct Infractions

This category of infractions addresses inappropriate actions by players or spectators at an event, always assuming the actions are intentional. A player can receive an Unsporting Conduct penalty even if they are not actively participating in a match. While enjoyment is encouraged, participants must be mindful that their behavior can negatively affect others.

2.1. Bribery

Bribery occurs when a player offers or accepts an incentive to influence the outcome of a game or match. This includes concessions, prize splits, or any other form of compensation intended to manipulate match results. Bribery is strictly prohibited as it compromises the integrity of the tournament and creates an unfair competitive environment.

Bribery is treated as a serious violation of tournament integrity and typically results in immediate disqualification and potential further penalties from the Tournament Organizer. If a player suspects bribery, they should immediately report it to a judge for investigation

Examples include:

- Offering an opponent cash in exchange for a concession.
- Proposing a prize split to encourage an opponent to concede.
- Agreeing to concede in a future event in exchange for a concession now.
- Offering to concede in return for a portion of a cash prize.
- A group of players coordinating concessions to manipulate tournament standings.

Recommended Starting Penalty:

Competitive: Disqualification

Professional: Disqualification

2.2. Cheating

Because cheating directly undermines the integrity of the game, it is treated with the utmost severity.

A player is considered to be cheating when they intentionally take or omit an action that violates the rules of the game or tournament in order to gain an advantage, or when they lie to a tournament official. For an infraction to be classified as Cheating, the player must be aware that their actions are prohibited and must be actively trying to gain an advantage from those actions. If either of these conditions is not met, the infraction falls under a different category.

Examples include:

- Lying to a Judge during an investigation to influence the ruling in their favor.
- Deliberately swapping cards between the Abyss and their hand to manipulate the game state.
- Sneaking additional cards into a limited-format deck to strengthen its power.
- Noticing an opponent's rule-breaking mistake and intentionally choosing to remain silent to gain an advantage.

Recommended Starting Penalty:

Competitive: Disqualification

Professional: Disqualification

2.3. Improper Concession

An Improper Concession occurs when a player asks for a concession or concedes a match after time is called (after taking an action). It also includes any attempt to pressure, manipulate, or coerce an opponent into conceding. This infraction is separate from Bribery, which involves offering incentives for a concession.

Examples of Improper Concession:

- A player who is worried about the game ending in a **draw due to time** asks their opponent to concede so that at least one of them wins.
- After a game ends in a **draw**, a player **reveals their hand** and insists they **"would have won with another turn"** to pressure their opponent into conceding.

- A player tells their opponent “**Come on, man, just pass, let’s finish the game**” in an effort to make them lose intentionally.

Recommended Starting Penalty:

Competitive: Warning

Professional: Game loss

2.4. Rules Sharking

Rules Sharking occurs when a player intentionally manipulates or exploits the rules to cause their opponent to commit an infraction or lose a valid game interaction. This behavior is considered unsporting and unethical, as it aims to gain an advantage through deceptive or predatory play rather than fair competition.

Malicious intent must be present; strict or methodical play alone does not constitute Rules Sharking. It is the Head Judge’s discretion to determine what qualifies as Rules Sharking at an event. It typically results in a **Warning or Game Loss**, but repeated or particularly egregious cases may lead to **Disqualification**.

Examples Include:

- A player pressures their opponent to play quickly by saying, “*Hurry up and finish your turn,*” and then immediately calls a judge when the opponent **misses** a trigger due to the rushed play.
- A player quickly plays a card after their opponent takes an action and then immediately tells their opponent they’ve missed a mandatory trigger, calling a judge to enforce an infraction.

Recommended Starting Penalty:

Competitive : Warning

Professional: Game loss

2.5. Stalling

Stalling occurs when a player intentionally slows down gameplay to take advantage of the round time limit. This infraction is distinct from Slow Play, as Stalling requires intent—meaning the player is deliberately delaying actions to gain an unfair tournament advantage.

If a player is playing slowly but without intent to exploit the clock, it should be handled under Slow Play instead. Judges must determine intent by observing patterns of behavior, repeated actions, and timing within the round.

Examples of Stalling:

- A player who is ahead in the game suddenly starts playing significantly slower as the round nears its end, making it harder for the opponent to catch up.
- A player repetitively checks either player's abyss multiple times in a single turn without making meaningful progress, intentionally running down the clock.
- A player takes excessive time to shuffle, resolve effects, or make basic decisions in order to delay the game

Recommended Starting Penalty:

Competitive : Match loss

Professional: Disqualification

2.6. Unsporting Conduct

Unsporting Conduct occurs when a player engages in behavior that is negative, offensive, or disruptive, impacting the safety or enjoyment of others. This conduct also includes actions that undermine the integrity or smooth operation of the event.

2.6.1. Unsporting Conduct – Minor

Players are expected to treat all attendees and staff with respect at **Wonders of The First** events. Those who fail to do so should be reminded with an appropriate penalty. Infractions in this category do not disrupt the event's operation but still require correction.

Examples include:

- Leaving minor trash in the tournament area.
- Roughhousing.
- Repeatedly touching or moving an opponent's cards without permission.
- Disturbing an ongoing match.

Recommended Starting Penalty:

Competitive: Warning

Professional: Warning

2.6.2. Unsporting Conduct – Major

Players must act respectfully towards all attendees and staff at **Wonders of The First** events. Those who do not should be issued a penalty. Infractions in this category directly affect event operations or cause emotional distress to others.

Examples include:

- Leaving a significant amount of garbage in the tournament area.
- Failing to follow instructions from event staff.
- Attempting to manipulate a match through intimidation or distraction.
- Refusing to sign a match slip.

Recommended Starting Penalty:

Competitive: Game Loss

Professional: Game Loss

2.6.3. Unsporting Conduct – Severe

Players must maintain respectful behavior towards all attendees and staff at **Wonders of The First** events. Penalties will be issued for those who fail to do so. Infractions in this category have a significant impact on event operations, cause major emotional distress, or involve physical altercations.

Examples include:

- Defacing the tournament area.
- Assault.
- Using physical threats towards players, event staff, or spectators.
- Theft.
- Using slurs or engaging in harassment.

Recommended Starting Penalty:

Competitive : Disqualification

Professional: Disqualification

2.7. Wagering

Wagering occurs when a player, or spectator places or offers bets on any aspect of the tournament, match outcome, or game-related event. This includes financial bets, item-based wagers, or any other form of stake. Betting by players and spectators is strictly prohibited as it undermines the competitive integrity of the tournament and can lead to conflicts of interest or external pressure on players. Any instance of betting should be immediately reported to a judge or Tournament Organizer for investigation.

Examples Include:

- A player bets their rare promotional card that they will win the next round.
- A group of players places wagers on who will make the top cut.

Recommended Starting Penalty:

Competitive : Match loss

Professional: Disqualification

3. Gameplay Infractions

Gameplay infractions occur when a player unintentionally violates the game's rules as outlined in the Wonders of The First Comprehensive Rules.

These infractions are generally assumed to be accidental, but if a judge believes the infraction was deliberate, it may be classified as Cheating, which carries more severe consequences.

Gameplay infractions are common mistakes but must be addressed consistently to ensure fair play and maintain the integrity of the tournament.

Judges should track repeated infractions to ensure that penalties scale appropriately. If a player commits three or more gameplay infractions of the same type during a tournament day (*excluding Failure to Maintain Game State*), the penalty for that infraction is upgraded by one severity level.

3.1. Failure to Maintain Game State

A Failure to Maintain Game State infraction occurs when a player, by their inaction, does not acknowledge an opponent's gameplay infraction (*other than a Missed Trigger*).

Players are expected to maintain game integrity by catching illegal plays as soon as possible. The earlier an infraction is caught, the easier it is to rewind and correct without major disruption. If an infraction is allowed to continue, both players share responsibility for the resulting state advantage.

Examples:

- The opponent plays a card without having enough energy to do so.
- The opponent plays a card with Core, but does not have the required Orbital Link.

Recommended procedure:

Issue a Warning to the player in addition to the procedure and penalty for the original gameplay infraction. This Warning is never upgraded, even if repeated.

Recommended Starting Penalty:

Competitive : Warning
Professional: Warning

3.2. Game Rules Violation

A Game Rules Violation occurs when a player fails to correctly apply the game rules to an element of the game they are responsible for, and the infraction does not fall under another specific Gameplay Infraction.

Players must ensure their actions (or inactions) follow the rules, and they also share responsibility when their effects interact with an opponent or instruct an opponent to perform an action.

If an opponent allows a Game Rules Violation to occur (and they are not responsible for it), they have committed a Failure to Maintain Game State.

However, if both players share responsibility, then both have committed a Game Rules Violation.

Examples:

- A player plays a card or activates an ability without paying the full cost to do so.
- A player plays a card with core but does not have the required orbital link.
- A player plays a card when an opponent's effect prevents them from doing so (shared responsibility).

Recommended procedure:

If the infraction was caught immediately do a simple rewind to the moment before the infraction was committed. If additional actions have occurred after the infraction apply a Partial Fix, treating the game as if the rules were followed correctly. If a Partial Fix is not possible perform a Full Rewind to before the infraction occurred. If the game state cannot be fixed (partially or fully) take no further action, and the game continues despite the infraction.

If the game state cannot be rewound or partially fixed, and the player has gained a significant advantage from the infraction, upgrade to an AP1.

If the opponent had a reasonable opportunity to acknowledge the infraction but did not, Issue a Warning for Failure to Maintain Game State

If there is shared responsibility for the error, Issue the opponent a Warning for Game Rules Violation.

Recommended Starting Penalty:

Competitive : Warning

Professional: Warning

3.3. Hidden Card Error

A player, through their own actions, has made a mistake involving private cards that cannot be rectified using only public information.

If a player mixes private cards from multiple zones but they can still be properly sorted back into their original locations without revealing additional information, this is not classified as a Hidden Card Error.

If a player accidentally views cards they were not permitted to see, but those cards can still be correctly separated, the infraction falls under Looking at Extra Cards instead.

Examples:

- A player draws extra cards during the start-of-round procedure.
- A player accidentally draws two cards instead of one due to card sleeves sticking together, and the extra card touches their hand.
- A player plays Wave Whisperer Bay, but the revealed card gets mixed into their hand.
- A player picks up a card from The Abyss and adds it to their hand.
- A player uses a seek effect, but the revealed cards are mistakenly mixed with their hand.
- A player moves a card from banishment into their hand when they were not supposed to.

Recommended procedure

If a player has mistakenly combined private cards from multiple zones into a single group, they must reveal the entire combined set of cards to their opponent. The opponent will then determine how the cards should be redistributed, ensuring that each zone retains the correct number of cards as before the error occurred. Once the opponent makes their decision, the cards are returned accordingly. If one of the affected

zones is the deck, the opponent chooses whether the card(s) should be placed on the top or bottom of the deck, in any order.

Recommended Starting Penalty:

Competitive : Warning

Professional: Warning

3.4. Looking at Extra Cards

A player, through their own actions, unintentionally views cards they were not permitted to see, provided that the cards remain in their original zone.

If the mistakenly viewed cards become mixed with another set of cards and cannot be distinctly separated, the infraction is instead considered a **Hidden Card Error**.

Examples:

- A player sees extra cards when drawing.
- A player sees extra cards when revealing/looking at cards from their, or their opponent's, deck.
- A player sees cards from their opponent's deck while shuffling it.
- A player accidentally knocks some cards off the top of their deck face-up.

Recommended procedure:

If the extra cards belong to the player's non-randomized deck and were previously known to the player (due to effects like Reveal), leave the cards in their correct location. If the extra cards were not previously known, reveal them to the opponent, who will then decide whether each card should be placed on the top or bottom of the deck.

If the extra cards were seen during the drawing phase at the start of the turn, but the opponent has not yet acknowledged the change of phase (for example, if the opponent intends to play or activate cards or abilities), leave the cards on top of the deck as they were.

If the extra cards are part of the player's fully randomized deck, issue the player a Caution and shuffle the extra cards back into the deck.

If the extra cards include five or more cards in the player's non-randomized deck, upgrade the penalty to an AP1 and shuffle the deck.

Recommended Starting Penalty:

Competitive : Warning

Professional: Warning

3.5. Missed Trigger

A player, by their own inaction, fails to acknowledge the resolution of a triggered effect they control when it becomes relevant.

Acknowledging a triggered effect requires either a visible change to the game state or communication between the players confirming that it has triggered. Visible changes include alterations to the existence and location of physical objects such as cards, tokens, and counters. Any player can acknowledge a triggered effect, not just its controller.

A triggered effect is considered missed if the player does not acknowledge it in a timely manner. However, it is not considered missed if any of the following conditions are met:

- Decision-based triggers: A triggered effect that requires the controller to make decisions (such as choosing targets or modes) must be acknowledged before the controller passes the turn.
- Rule-changing triggers: A triggered effect that impacts the rules of the game must be acknowledged before an action is taken, or acknowledged by stopping an action that would be made illegal by the triggered effect.
- State-changing triggers with visible effects: A triggered effect that visibly changes the game state, or requires a decision upon resolution, must be acknowledged before any player takes an action that could only occur after the effect has resolved.
- State-changing triggers with non-visible effects: A triggered effect that changes the game state in a non-visible way must be acknowledged before it first affects the game state in a visible manner.

In addition, the following cases are not considered a Missed Trigger infraction:

- Optional effects: If the only part of a triggered effect that would impact the game is optional, and it is not acknowledged, it is assumed that the controlling player decided to not generate that effect, and it is not considered an infraction.
- Resolved effects: If part of a triggered effect has already resolved and had a visible impact on the game, the trigger is considered acknowledged, and any

unresolved part(s) of the trigger that are missed will be considered a Game Rules Violation instead.

Players are responsible for ensuring the resolution of any triggered effects they control. While players are not required to acknowledge triggered effects they do not control, they may still choose to do so. The controlling player is responsible for ensuring that any decisions or actions taken by the opponent during the resolution of the effect are legal and appropriate; they cannot assume the opponent will choose not to take any optional action.

Although it may be beneficial for a player to not acknowledge the triggered effects of their opponents, they may not intentionally cause the effects to be missed. A trigger is only considered missed if the controlling player acknowledges or allows the game state to progress past the point where the trigger is relevant, without acknowledging the effect first. Intentionally progressing the game state to cause an opponent to miss a triggered effect is considered **Rules Sharking**.

Missing the resolution of a triggered effect, like a Game Rules Violation, can undermine the integrity of the game and potentially create an advantage for the player. However, unlike deliberate actions such as playing a card or activating an ability, triggered effects occur as a result of other in-game events rather than direct player decisions. Due to their frequency and the fact that they often do not visibly alter the game state immediately, players should not face severe penalties for missing them. That said, deliberately ignoring a triggered effect a player controls is considered **Cheating**.

Examples:

- *Jorambe* is targeted by a portal effect, but the controlling player does not banish him.
- *Scarlet Devourer* is played, but the controlling player does not return a Wonder they control to their hand.
- A player controls *Rockskin Shredder* but forgets to add counters when their opponent harvests a land.
- A player forgets to create an Insect token when attacking in a realm where they control *Deep Pincer*.

Recommended Procedure:

If the infraction is caught immediately, rewind the game to before the infraction occurred.

If additional actions have been taken, apply a partial fix as though the triggered effect resolved at the appropriate time.

If a partial fix is not possible, rewind the game to the latest point where the trigger should have been acknowledged.

If neither a partial fix nor a full rewind is feasible, take no further action, and the game continues as if the effect was triggered but did not resolve.

If the player would have gained a significant advantage from missing the trigger, and the effect was originally created by the player (not the opponent), issue a **Warning**.

Recommended Starting Penalty:

Competitive : Caution

Professional: Caution

3.6. Presenting Cards Error

The player, by their own action, has presented an illegal set of cards or cards in an illegal state during the start-of-game procedure, despite having a legal decklist and card pool.

This infraction only applies once the player has a legal decklist and card pool. If the cards presented are deemed illegal, it is typically considered a **Card-Pool Contents Error**.

Examples:

- A player presents a deck with too many or not enough cards specified by the format.
- A player presents their starting deck but accidentally includes tokens.

Recommended procedure:

If the game has not started and the presented deck does not contain the correct number of cards, the player must add cards from their card pool to reach the minimum required or remove cards to meet the maximum deck size.

If the game has not started and tokens are discovered in the deck, remove the tokens, and the deck should be reshuffled. Downgrade the penalty to a caution

If tokens are discovered after the game has begun, carefully remove the tokens while maintaining the order of the deck

At a Professional REL, for all infractions except those involving tokens being removed, upgrade the penalty to an AP1.

Recommended Starting Penalty:

Competitive : Warning

Professional: Warning

3.7. Shuffling Error

A player, through their own action, illegally randomizes an ordered set of cards, such as a deck, in a way that violates game rules or tournament policies.

When a player shuffles a non-randomized set of cards, the integrity of the game state is irreparably compromised. This action may result in one of the players gaining an unfair advantage due to the redistribution of cards in the shuffled set.

Examples:

- A player shuffles their abyss cards into their deck.
- A player absentmindedly shuffles their deck mid-game.
- A player counts the cards in their opponent's deck, then shuffles it out of habit.

Recommended procedure:

Ensure the affected deck is sufficiently randomized before proceeding.

If the player has gained a significant strategic advantage through improper shuffling, upgrade the penalty to a Game Loss.

Recommended Starting Penalty:

Competitive : AP1

Professional: AP1

4. Tournament Infractions

Tournament infractions occur when a player violates the rules of the tournament as outlined in the Wonders of the First Tournament Rules and Policy. These infractions are presumed to be unintentional, but if a judge suspects intent, the infraction may be escalated to Cheating.

If a tournament rule is violated but is not listed as an infraction, the judge should educate and correct the player without issuing a penalty.

Ignoring a judge's instructions is considered Unsporting Conduct and will be penalized accordingly.

If a player commits the same tournament infraction twice in a single day, the second penalty should be upgraded by one severity level.

Tardiness and Slow Play are exceptions and do not escalate in severity.

For multi-day tournaments, the penalty count resets at the end of each day and does not carry over.

4.1. Card Pool Contents Error

The player, through their own actions, has presented cards that do not match their submitted decklist, even though the decklist accurately reflects what the player intended to play.

This infraction applies both when a player presents cards during a game and when they submit their card-pool to a judge for inspection. If there are cards stored near the player's card-pool that could reasonably be considered part of the registered card-pool due to their proximity, they are treated as part of the player's card-pool unless they are:

- Cards not listed on the decklist that are promotional cards distributed at the event.
- Cards listed on the decklist that have been proxied for the duration of the tournament.

These cards must be sleeved in a way that clearly distinguishes them from the actual cards in the registered cardpool to avoid confusion.

Examples:

- A player stores four of the same secondary card in a Constructed tournament.
- A player stores a token card, not listed on their decklist, with other tokens in their card pool
- A player stores any amount cards that are not on their decklist but have been sleeved the same, within the same deck-box as their registered card-pool.

Recommended procedure

Have the player remove any extra cards from their card-pool that are not listed on their decklist. Take note of any missing cards and educate the player that they may find replacements at their convenience.

If only cards are missing, downgrade to a Caution.

If the extra cards removed do not provide any strategic advantage, downgrade to a Warning.

If the player has extra copies of a card that did not impact the game, and the player reports the error immediately, downgrade to a Warning. If this was noticed while drawing or revealing cards, replace the draw/reveal with the next card instead.

If there is a significant discrepancy between the card-pool and the decklist, or the player has gained a strategic advantage from the card-pool, upgrade to a Match Loss. At professional REL, upgrade to a Disqualification.

Recommended Starting Penalty:

Competitive : AP1

Professional: AP1

4.2. Communicating Incorrect Game Information

A player, through their own action or inaction, has misrepresented non-private information or failed to fully answer a question regarding visible or public

information, leading their opponent to make a decision based on incorrect or incomplete information.

Clear and accurate communication is crucial in Wonders of The First. Players are expected to maintain a transparent game state through effective communication and address any ambiguities or uncertainties. However, players may unintentionally make communication errors, particularly across cultural or language differences, and should not be penalized harshly for these mistakes.

Communication is not limited to verbal statements; it can also include physical representations, such as the positioning of cards in the play area or the use of counters or markers.

If an opponent makes an assumption about ambiguous information without seeking clarification, or if the incorrect or missing information does not impact their decisions, it is not considered a violation of Communicating Incorrect Game Information.

Examples:

- A player partially obscures a permanent with their hand, leading the opponent to attack under the false assumption that they have the higher power in the realm.
- A player tracks their resources with dice, spends one resource to play a card, but fails to update the dice accordingly.
- A player is asked for the total power of a Wonder in a realm and provides an incorrect total.

Recommended procedure

If the game has not progressed too far to be rewound, revert the game state to the point just before the affected action occurred, rather than to the point of miscommunication.

At a competitive REL, if the miscommunication was caused by the player failing to update or remove a marker representing visible or public information, consider downgrading the penalty to a Caution.

Recommended Starting Penalty:

Competitive : Warning

Professional: Warning

4.3. Decklist Error

The player, through their own actions, has submitted a card-pool registration sheet (decklist) that either does not match the cards they intend to use or is otherwise illegal

Decklists are crucial in competitive tournaments as they ensure that the cards a player uses (their card-pool) remain consistent throughout the event. This prevents any potential strategic advantages that could arise from altering the card-pool during the tournament. Decklists are crucial in competitive tournaments as they ensure that the cards a player uses (their card-pool) remain consistent throughout the event. This prevents any potential strategic advantages that could arise from altering the card-pool during the tournament.

If the decklist is legal and reflects what the player intended to play with, but there is an issue with the card-pool itself it is considered a Card-Pool Contents Error

Examples:

- A player forgets to include a card on their decklist.
- A deck exceeds the required DBS score for the event.
- A player lists "Azure Vault" on their decklist but has "Dwarven Vault" in their card pool instead.
- A Player includes tokens in their main deck and not their token deck

Recommended procedure

If the decklist does not reflect the cards the player intends to use, update the decklist to match the player's intent.

If the decklist error is minor and is caught before the first round begins, or if the player reports the error themselves, issue a Warning.

If the discrepancy between the decklist and the player's deck is significant, upgrade the penalty to a Match Loss.

If a player's deck contains tokens and removing them reduces the deck's card count to an illegal state, add token lands until the deck has at least 50 cards.

Recommended Starting Penalty:

Competitive : AP1

Professional: AP1

4.4. Draft Procedure Violation

The player, through their own action, commits a procedural infringement during a draft.

Drafting is a critical procedure that occurs outside of the actual gameplay and involves strategic decisions that can influence the outcome of future games. Because of this, it should be monitored with the same level of scrutiny as the actual game itself. Players may gain an unfair advantage, information, or alter the state of the draft by failing to follow the established rules. Infractions are generally viewed as the result of ignorance of the draft procedures, but any deliberate violation to gain an advantage is considered Cheating.

In certain situations, it's crucial for the Judge to avoid interrupting the player's thought process, as doing so could slow down or disrupt the draft. The Judge should wait until the current pack, or in some cases, the entire draft, has concluded before imposing any penalties. This is particularly important if the penalty could result in disqualification, as interfering with the drafting process would not be ideal.

4.4.1. Draft Procedure Violation - Minor

The player commits a violation of the draft procedure that can be easily corrected or does not give them a significant advantage or negatively impact the fairness of the draft.

Examples:

- A player passes a pack to the wrong player or in the wrong direction.
- A player selects a card after the draft pick time has expired.
- A player starts looking around at other players or tables during the draft, distracting themselves or others.
- A player picks a card from the pack, places it on top of their draft pile, and then returns it to the pack, potentially affecting the flow of the draft.
- A player picks up and examines their draft pile during a draft round when not in an official review period.

Recommended procedure

If necessary, pause the draft and issue the player a Warning. Ensure that pausing the draft happens at an appropriate moment, such as during or after a pick, at the end of a pack, or after the entire draft process, to avoid disrupting the players or the overall flow of the draft.

Recommended Starting Penalty:

Competitive : Warning

Professional: Warning

4.4.2. Draft Procedure Violation - Major

The player commits a violation of the draft procedure that significantly disrupts the integrity of the draft process or gives the player a clear and unfair advantage, which cannot be easily corrected or reversed.

Examples:

- A player mixes up their draft pack and drafted pile, making it impossible to distinguish between cards that have been picked and those that haven't.
- A player verbally reveals their current or planned draft picks.
- A player examines another player's draft pack to gain strategic information.
- A player rotates a card upside down to signal their pick to the next player.

Recommended procedure

If the infraction requires immediate attention, pause the draft at an appropriate time and address the player's behavior. After the draft concludes, issue the player a Match Loss. This ensures the player does not influence the draft knowing they have already received a loss, preventing any unfair advantage for themselves or disruption to other players still in the draft.

Recommended Starting Penalty:

Competitive : Match Loss

Professional: Match Loss

4.5. Insufficient shuffling

The player, Through their own inaction, fails to shuffle a deck of cards to sufficiently randomize the order of the cards.

Players can randomize their deck using various shuffling methods, such as riffle, overhand, or wash shuffling, and should use more than one technique for proper randomization. A final cut is recommended. Methods like pile counting or other deterministic shuffling techniques are not sufficient on their own. Players must shuffle thoroughly and efficiently to ensure a fair game.

Examples:

- A player completes their start-of-game procedure, riffle shuffles their deck only once, and presents it to their opponent.
- A player overhand shuffles while keeping the deck facing them and then presents it to their opponent.
- A player arranges their deck into six piles, stacks them together, and presents it without further shuffling.
- A player forgets to shuffle after searching their deck during the game.

Recommended procedure

Supervise the player as they shuffle their deck and provide guidance if their technique is insufficient. Educate them on proper shuffling methods to ensure they understand what constitutes acceptable randomization.

Recommended Starting Penalty:

Competitive : Warning

Professional: Warning

4.6. Marked Cards

The player, by their own action, presents a deck where one or more cards are easily distinguishable from the others while they are in the deck or face-down.

Players must ensure that all cards and card sleeves in their deck are in good condition and free from markings or features that make them identifiable while face-down or

within the deck. This includes, but is not limited to, scuff marks, nail indents, bent corners, and card curvature.

If a player has deliberately marked their cards or intentionally exploited marked cards for an advantage, it is considered Cheating and will be penalized accordingly.

Examples:

- A player has an unsleeved deck where the card backs have varying colors with no discernible pattern to which cards have which colored backs.
- A player has a sleeved deck where some sleeves have bent corners due to flicking the cards, with no pattern to which cards are in which sleeves.
- A player has a sleeved deck where the image on the back of the sleeves has inconsistent border widths, with no pattern to which cards are in which sleeves.
- A player has a deck with a mix of foil and non-foil cards, where the foil cards are slightly warped, with no discernible pattern to which cards are warped.
- A player has a sleeved deck where a few sleeves have visible bubbles on the back, clearly a manufacturing error, with no significant cards in the affected sleeves.
- A player has a foil card that is warped and easily distinguishable from the rest of the deck.
- A player has a sleeved deck where one sleeve has a visible mark on the back, clearly a manufacturing defect, and the card in that sleeve is significant to their deck's strategy.
- A player has three copies of the same card, each in sleeves of a slightly different shade compared to the rest of the deck.

Recommended procedure

Require the player to re-sleeve or replace any marked cards to ensure no cards are distinguishable. The Head Judge may issue a proxy for the affected cards. The player cannot begin another match until the issue is resolved.

If marked cards are identified during a game and can be corrected quickly without disrupting play, the player must address them immediately. Otherwise, wait until the match is completed before informing the player and requiring corrections.

If the Head Judge determines that the marked cards could have provided a significant strategic advantage, the penalty is upgraded to a Match Loss.

Recommended Starting Penalty:

Competitive : Warning
Professional: Warning

4.7. Outside Assistance

The player, by their own actions, receives strategic help from someone or something that is not part of the game, or provides strategic help to another player in a game they are not involved in.

If a player receives outside assistance during a game that provides them with a strategic advantage, the infraction will result in a Game Loss. This penalty ensures the advantage is completely negated, awarding the win to the opponent.

Examples:

- A player refers to matchup notes during the game, after the start-of-game procedure has concluded.
- A player communicates with a spectator through hand gestures, facial expressions, electronic devices, or other forms of communication.
- A spectator walks near a game in progress and reacts to cards in a player's hand, unintentionally conveying private information to their opponent.

Recommended procedure

If a spectator is also a player in the same event, issue them a Game Loss for their next match and remove them from the play area.

If the outside assistance is harmless or was done out of ignorance, downgrade the penalty to a Warning.

Recommended Starting Penalty:

Competitive : Game Loss
Professional: Game Loss

4.8. Slow Play

A player, through their own actions, takes an unreasonably long time to make a decision that advances the game state, without the intent to gain an advantage.

Slow Play typically occurs without the player's awareness (unlike Stalling). A simple educational reminder is often enough to improve the player's pace and ensure the game completes within the time limit.

A Slow Play infraction should only be penalized if confirmed by a Judge through direct observation of the game's progression. Spectators or player testimony alone should not be used as the basis for the infraction.

Judges should not provide additional time to the table based solely on reports or accusations of Slow Play.

Examples:

- A player repeatedly checks either player's Abyss before making a move.
- A player spends excessive time shuffling after searching their deck.
- A player holds one card in their hand and takes an unreasonable amount of time to decide their next action.

Recommended procedure

Educate the player on the importance of playing at a reasonable pace. Observe the game to ensure the player makes one or two decisions at a reasonable speed.

If the player continues to play too slowly after receiving a Caution, issue a Warning and monitor their pace.

If the player receives two Warnings for Slow Play during the tournament, upgrade the penalty to a Game Loss.

Recommended Starting Penalty:

Competitive : Caution

Professional: Caution

4.9. Tardiness

A player is considered tardy if they are not at their assigned table when the round timer starts or if they have not completed a required tournament procedure on time.

If a decklist is required and has not been submitted, the player cannot start their match and is considered tardy until the tournament organizer receives the decklist.

If a round begins earlier than scheduled (such as when all matches from the previous round finish early), tardiness is measured from the scheduled end time of the previous round.

The player who is present should notify a Judge if their opponent is late or arrives late so the correct penalty can be applied.

Judges may grant round start extensions for players needing extra time between rounds.

Examples:

- A player arrives at their seat five minutes after the round has started.
- A player mistakenly sits at the wrong table and only realizes after beginning a match with the incorrect opponent.
- A player mistakenly completes an entire match against the wrong opponent.
- A player loses cards from their card-pool and is unable to find replacements within 10 minutes.

Recommended procedure

Extend the round time by the total amount of time the player was delayed since the round started.

If the player is less than 1 minute tardy, issue a Warning.

If the player is more than 10 minutes tardy, issue a Match Loss. If both players are more than 10 minutes late, issue a Match Loss to both players. The tardy player(s) should be dropped from the tournament before the next round pairing unless they report to the scorekeeper before that time.

If a player mistakenly completes an entire match against the wrong opponent, only the player at the incorrect table will receive a penalty; the opponent at the correct table will not be penalized.

Recommended Starting Penalty:

Competitive : AP1

Professional: AP1
